DUNK ISLAND RESORT, CLIENT: GPT, APRIL 2006 TO SEPTEMBER 2006

Dunk Island Resort was in the direct path of the Category 5, Cyclone Larry before it crossed the coast in March 2006 causing further devastation to crops and buildings.

The impact of 'Larry' on the popular island, which is a National Park and a haven for tourists wishing to visit the Great Barrier Reef, was so extensive that both the resort and National Park were closed to visitors.

Ri-con replaced several buildings which were ruined by the storm surge accompanying the cyclone with new purpose built structures. Most of the existing roofing on the island was also replaced.

Our expertise in remote and difficult locations was utilised to remove the damaged buildings and rebuild the resort to full operation within the clients restricted time frame and the inclement weather which followed 'Larry'.

Many of the damaged interior fittings and furniture had to be replaced. We were able to successfully source new materials from Australia and around the world in record time to get the popular Resort back in operation.

The restoration of Dunk Island involved more than 350 personnel over a period of 25 weeks incurring a total cost of \$32 million dollars.
